Chapter 1	1
A research project for a manager	
1. Research in general, research in management	2
1.1. General definitions	
1.2. Management research paradigms	
1.3. The objectives of management research	
2. The eco-system of research in management	19
2.1. Universities and research	
2.2. Hierarchy of scientific publications in management	
2.3. Division between academia and management	
3. The Doctorate of Business Administration	36
3.1. Presentation of the DBA	
3.2. The DBA research subject	
3.3. The DBA thesis supervision	
4. The DBA three-step global organization	48
4.1. Classical and article-driven thesis	
4.2. Classical TAT methods	
4.3. The three-step method	

5. Interviews with experts	61
5.1. Professor Dominique Colomb: The transmission of research mindset adapted to the design of a DBA thesis	
5.2. Professor Zheng Lihua: Interculturality in international exchanges in the context of a DBA thesis	
6. Templates.....	66
6.1. Template 1: Research project	
6.2. Template 2: Examples of writing the research context	
6.3. Template 3: English transition words to help you	
6.4. Template 4: Oral presentation of the research project	
References.....	77
 Chapter 2	 79
Understanding what has been done so far	
1. Exploring the literature	80
1.1. What is background literature?	
1.2. Finding research sources	
1.3. Finding other sources	
2. Synthetizing and exploiting the literature	91
2.1. Literature review method	
2.2. Exploiting the literature	
3. Designing the theoretical model	97
3.1. Most famous models in management science	
3.2. The adoption of a model for the study	
4. Defining the research objectives	122
4.1. The nature of research questions	
4.2. Defining the research problem	
4.3. Designing the hypotheses	
4.4. Designing the objectives in action research	
5. Interviews with experts	130
5.1. Professor Bertrand Fauré: The nature of scientific knowledge	
5.2. Professor Wang Xiao: The DBA: Cross vision of research cultures	
6. Templates.....	133
Template 1: Synthetizing background literature	
Template 2: Exploratory factor analysis	
Template 3: Displaying the research model	
Template 4: Oral presentation of literature review	
References.....	142

Chapter 3	145
Organizing and designing the study	
1. Defining the appropriate research paradigm	146
1.1. Deductive and inductive approaches	
1.2. Circular iterations between theory and practice	
1.3. What choice for a DBA thesis?	
2. Defining methods.....	154
2.1. The threefold tilter	
2.2. Study objectives and choice justification	
2.3. Qualitative vs. quantitative methods	
2.4 Overview of classical method choices	
3. Qualitative methods	158
3.1. Main principles	
3.2. Techniques for data collection	
3.3. Preparing the qualitative analysis	
3.4. Analyzing qualitative data	
4. Quantitative methods	182
4.1. Main principles	
4.2. Measuring	
4.3. Psychometric properties of measuring scales	
4.4. Building and testing measures	
4.5. Most common quantitative methods	
5. Combining methods.....	223
5.1. Mixed methods	
5.2. Case studies	
5.3. General design of the research	
6. Interviews with experts	241
6.1. Professor Laurent Bertrandias: Advanced methods in marketing research	
6.2. Professor Nicolas Arnaud: Advanced methods in communication science	
7. Templates.....	246
Template 1: Research questions	
Template 2: Developing hypotheses	
Template 3: The typical semidirective interview	
Template 4: Marketing scales	
Template 5: Oral presentation	
References.....	256

Chapter 4	261
Conducting and concluding the study	
1. Collecting the data and exploiting the data	262
1.1. Sampling	
1.2. Advice for data collecting	
1.3. Verifying the psychometric properties of the constructs	
1.4. Displaying the results and answering the hypotheses	
2. Concluding the study	271
2.1. Academic and theoretical contributions	
2.2. Limitations and agenda for future research	
2.3. Managerial contributions and recommendations	
3. Writing the final thesis.....	274
3.1. The scientific style for writing	
3.2. Presentation of thesis structure	
3.3. APA style and Oxford style	
3.4. Academic rules of citation	
3.5. Checklist for your final document	
4. Advice for the oral defense	287
4.1. The preparation of the oral defense	
4.2. The participants	
4.3. The proceedings of the oral defense	
5. Interviews with experts	289
5.1. Professor Rhona Johnsen: The expectancies toward the quality of the DBA thesis in management	
5.2. Professor Denis Lacoste: The just balance between pertinence and rigor	
6. Templates.....	292
Template 1: Synthesis of the thesis	
Template 2: Writing qualitative results	
Template 3: Writing quantitative results	
Template 4: Analyzing the research findings	
Template 5: Oral presentation	
References.....	312

Appendix A	315
Thesis review cards

- Box 5-5: Abstract of DBA scholars' testimonies about self-accomplishment

INTRODUCTION

To whom is this book dedicated?

You have been a business manager for a long time, and you have gained much experience. You already have reached the most common professional goals (being a director, managing a large team, taking big decisions), but you still miss something you fail to explain ... is it the social and professional need for acknowledgment in your career that leads you to engage in research? Is it the intuition that you will be more competent after following a doctoral program? Professor Pierre Volle, from University Paris-Dauphine displays a list of motivations for managers to engage in a DBA program:¹

- Give a scientific scale to your “intuitions.”
- Gain legitimacy/visibility in your professional sphere.
- Access a global vision of the strategy of a firm, its functional organizations including the latest projections in theoretical research within a scientific method framework.
- Participate in a significant way to the evolution of knowledge in your domain of expertise by reviewing your business practice.
- Become a high-level consultant.
- Work at a high level in your field of expertise and at the heart of your company.

At the very beginning of the project, the motivations are high; the “student managers” think they have great contributions to share with the entire world... but they often lack methods, tools, and organization. Moreover, entering a doctoral program at the university is not considered as simple, and even a Ph.D. thesis does not seem to fit the predefined objectives.

¹ <http://edba.dauphine.fr/en/why-an-edba.htm>

What is this book for?

After supervising many research scholars for many years, we realized the necessity for this book. Indeed, many research books are directed to pure scholars and the vocabulary used is often esoteric; hence no publication seems to really address managers willing to engage in doctoral degrees. Besides, research and researchers often seem to be far from the “real world.” It is even difficult to managers and academic people to meet and to organize their collaboration, due to cultural differences, different timetables, and many other causes.

Usually, research is achieved by scholars, not by managers. When beginning a DBA thesis project, the participant often wonders about many subjects: what discipline, what objectives, what thesis format, what subject, what data collection, whether starting by reading the literature, or observing the environment, or collecting data. Which aspect am I supposed to begin with? How to frame a research project?

First, this book is a method book. We have conceived it not only as a simple and accessible display of the most current research methods, but also as a complete and operational methodology guideline. This book has been conceived to accompany managers through the entire process of a DBA thesis; it provides theory and practice, both indispensable for the achievement of the research project. This book draws much on the contributions of major references, and tries to offer simplified, clear, and applicable standards for DBA participants. The main objective is, on the one hand, the synthesis between rigor and details in the use of methods, and on the other hand, soundness and intelligibility in handling those methods with special adaptations for the specific case of the DBA.

Second, this book illustrates a living experience, because doing a thesis is a human adventure. “Non-classic” students starting a doctoral project are facing an utterly new world where they do not measure the codes and methods. That is why this book contains many testimonies from DBA scholars, both participants and supervisors. This aspect will help readers to project their own cases toward new formulations and valuable solutions. The objectives of this book are detailed as follows:

- Helping the DBA participants have a global vision of management research;
- Identifying, explaining, and discussing the theoretical approaches and methods pertinent for a DBA thesis;
- Providing tools and templates for the design of a DBA thesis;
- Giving insights into the ways to leverage your DBA thesis.

How to use this book?

General structure of the book

Through our experience and accumulated knowledge, we have designed a “three-step method” to achieve the difficult project of writing a DBA thesis. This tailor-made method is specifically designed for managers willing to accomplish a doctoral degree.

Thus, the book is divided into five chapters: one preparatory step (the research project), three steps for the thesis itself (step 1 for background literature, step 2 for research design, and step 3 for closing the study); the ahead and concluding chapter holds advices to help DBA doctors empower their new skills. This “1+3+1” step approach will strongly favor a clearer vision of an article-driven thesis. Figure 1 summarizes the general structure of the three-step method and therefore the structure of this book.

Chapter 1 is dedicated to the preparatory step, and chapters 2 to 4 are dedicated to the real three steps of the three-step method. Each chapter corresponds to one step of the research progression. Chapter 5 is dedicated to the post-DBA thesis period; it helps you to leverage your DBA in your personal life, in your firm, in your career.

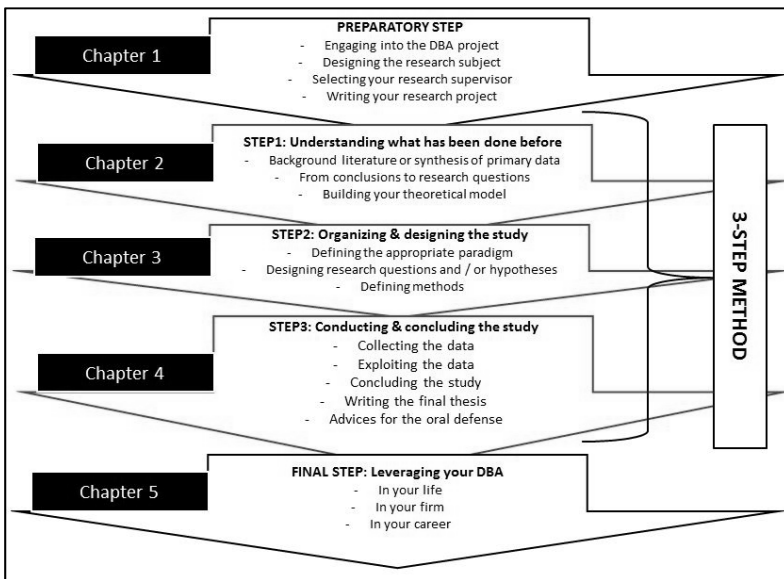

Figure 1: General structure of this book

Each chapter will accompany you alongside your progression and will give you the keys to perform the ongoing step. The core advantage of this book lies in its practical aspect:

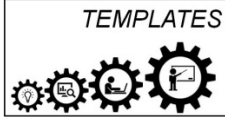

- You discover theories and methods (reading the “content” sections).
- You directly use delivered tools (using the “templates” section) to start and to structure your research project.

Guided tour of the book features: Alongside this textbook, diverse types of classical objects (figures and tables) will be found, which is classical. What is more in this book is the presence of specific objects, dedicated to providing a living experience of DBA research:

- templates
- testimonies from DBA participants
- testimonies from supervising professors
- thesis review cards

To make the presentation clearer, specific logos have been used to help the readers easily find the resources and hence better exploit this book. Table 2 presents the logos used as milestones:

Table 2: The logos associated to the features of this book

	<p>This logo is present in all sections developing subjects or tools for which a template has been designed. The exact page to find the template will be detailed near the logo.</p>
	<p>This logo announces specific boxes containing abstracts of the DBA scholars’ testimonies; they are inserted in the sections, as relevant insights. The full-text testimonies are available at the end of the book.</p>
	<p>This logo announces specific boxes containing testimonies from DBA research supervisors. The testimonies are placed in the end of each chapter. References to these testimonies are made in the text.</p>

 <p>THESIS REVIEW CARDS</p>	<p>This logo announces synthetic thesis review cards. They are placed in the end of the book. References to available review cards are made inside the text, in the relevant sections.</p>
--	--

What is a template and how to use it?

A template is a “shaped piece of rigid material used as a pattern for processes such as cutting out, shaping, or drilling.”² This definition from the Oxford dictionary comes from the dressmaking universe, but it well describes the utility of a template: to help beginners (or even confirmed professionals) achieving difficult or technical precision tasks. The Cambridge dictionary gives this definition: “a pattern made of metal, plastic, or paper, used for making many copies of a shape or to help cut material accurately.”³ This definition, very nearby the first one, extends the possible application to industry, and to the fact that when using a template we can produce large series of standardized objects. In computer science, a template is “a system that helps you arrange information on a computer screen.”⁴ Here the linkage with a physical object is no more present, but we have kept the notion of a guideline, a common thread enabling you to be guided in the most difficult (or the more technical) aspects in your tasks.

In management education, templates have been used for a long time too. Generally, a template is a virgin document where you must fill in forecast gaps. A template is a working document; it differs from a simple form, because it gives you the general shape you need to adopt for your future document. In terms of methods, the template is gradually filled and mastered alongside your progression, and the template is little by little going to become your document. To conclude, we can say that a template is, or can be a:

- method and format guideline
- blank document to start with, a reliable framework
- set of tools focused on the step you are preparing
- selection of possible formulations and presentations

² <https://en.oxforddictionaries.com/definition/template>

³ <http://dictionary.cambridge.org/dictionary/english/template>

⁴ <http://dictionary.cambridge.org/dictionary/english/template>

Templates are the originality of this book. Indeed, many research books promise they are focused on methods, but give the impression of a great complexity. We have tried to find a good compromise between the ambition of scientific excellence, and a relative simplification of processes so managers could more easily design a DBA thesis project. Templates are this link between theory and practice, leading the managers and DBA participants step by step through a DBA thesis project, from the conception of the project to the final oral defense. A template is a document designed to help you write a specific part of a complex, larger document. Templates are thus adapted to key paragraphs, sections, or documents alongside the thesis process. There are sixteen templates and one “appendix template,” dedicated to the final synthesis of the thesis.

The templates are divided into the four active steps of the thesis process. Templates are not all like one another. They are designed following different logics and purposes, thus they are divided into four themes:

- project conception and presentation
- background literature and model development
- methods and study design
- results and conclusions

Each theme includes four parts and ends with a template dedicated to an oral presentation. The “appendix template” is considered out of the four themes. Table 3 shows a synthesis of the functions of the templates of this book.

Table 3: Synthesis of the functions of the templates

Template	Formal Function	Framework Function	Method Function
1.1	Research project written document	+++	+
1.2	Writing the context of the research	+	+
1.3	English transition words and scientific style	+	++
1.4	Presentation of the research project	+++	+
2.1	Exploratory factor analysis	++	+
2.2	Synthesis of literature review	++	+++
2.3	Displaying hypotheses and model	+++	++
2.4	Presentation of the theoretical part	+++	++
3.1	Research paradigm and mode of reasoning	++	+++
3.2	Choice of methods and justification	++	+++
3.3	General design of the research	++	++
3.4	Presentation of methods and study design	++	++
4.1	Empirical results and answers to hypotheses	++	+++
4.2	Research findings and managerial contributions	++	+
4.3	Thesis final structure	++	++
4.4	Presentation of the final thesis	++	+
App	Synthesis of the thesis	+	+++

Formal function: In this case, the template is a prewritten document from which you must benchmark. It is not really a “fill in the gaps document,” because the situations are impossible to standardize beyond certain limits. The formal function helps you begin writing the document, by adapting it before it becomes your document. This “formal” function is somehow also a “help-to-write function:” Templates make suggestions of writing for specific sections of the thesis (i.e., English transition words, or synthesis of the literature). These templates give key words and key sentences to use.

Framework function: In this case, the template summarizes the various parts of a global document (i.e., the research project, or the structure of the thesis). They are linked to structure aspects, suggestions of presentation of the paragraphs or the slides; they give ideas for presenting concepts.

Method function: Method templates are designed to help you in critical moments (i.e., guidelines for semidirective interview, or the exploratory factor analysis). Method templates suggest the necessary steps, by structuring methods and key aspects.

NOTES ABOUT THE AUTHORS

Jacques DIGOUT is a professor at Toulouse Business School where he gives Marketing, eMarketing, and research methodology courses. He is the Academic Director of the Doctorate in Business Administration (DBA) and of the specialized Master in Marketing Management & Communication (M2C). He also holds the Digital Marketing Chair and is responsible for the Marketing & Communication Networks Research Lab. His papers were published in international scientific ranked journals where he is also a member of the editorial review board. He has published many books on eMarketing, eRecruitment and advertising with Pearson, Dunod, Vuibert, and De Boeck.

Sylvain SÉNÉCHAL is a professor at University Toulouse 3 (IUT de Tarbes). He graduated his master degree in TBS and obtained his Ph.D. at Toulouse School of Management (TSM). After about ten years as a business executive, he became a consultant, and then a researcher in marketing and research methods. He published articles in international journals such as *The Journal of Business Ethics*, *Innovative Marketing*, and *La Revue Française du Marketing*; he also presented papers in several international conferences, including *The AFM International Marketing Conference*. Sylvain Sénéchal has supervised more than 100 research dissertations, with bachelor, MSc, MBA, and DBA participants; he is a member of the TBS Scientific Committee.

Charbel SALLOUM is a Professor HDR and the Associate Dean for Research at the USEK School of Business of the Holy Spirit University of Kaslik (Lebanon). He is also a part-time faculty member at the George Washington University (GWU) School of Business where he was a Fulbright Visiting Scholar Lecturer/Researcher. As a market trader, he has pursued a path into the financial market and had career experience in the United States, New York Stock Exchange (NYSE), and the Chicago Mercantile Exchange (CME). His research works revolve around corporate governance and gender diversity, notably regarding family businesses. His papers were published in international scientific A, B, and C journals. He also is an academic evaluator for Pearson Global Editions.

He is a research associate at CEREFIGE Lorraine University and a visiting professor at Sorbonne University/Panthéon-Assas, IAE Lyon 3, IAE de Lille 1, IAE de Metz, and Toulouse Business School.

ACKNOWLEDGMENTS

The authors first want to sincerely acknowledge the respondents of the interviews. We first acknowledge our DBA participants, for the quality and sincerity of their testimonies, included in this book; we are also grateful to them for authorizing us to publish their testimonies. We can cite in alphabetical order: Yazid DEBBICH, Priscille DJOMEN, Christel GAYET, Salman KHAN, Micheline KHAZZAKA, Marija LAZAREV, Patrice MAILLOT, Runchao Lawrence MAO, Simon-Pierre NGUIMBOCK, and Zhenghuan ZHANG. The authors also acknowledge other DBA scholars, who did not directly contribute to this book, but who supported us in many moments; we can cite Sam BARROWS, Mazen BEKDASH, Denis COHIGNAC, Ding RUNCHEN, Omar KADDOUHA, Pierre FORTIN, and Daniel MENDELENYI.

Then the authors warmly thank the professors who brought their testimonies to this book. We are grateful for their shared experiences, and we hope their insights will be as precious to future readers as they were for us. We can cite in alphabetical order: Prof. Nicolas ARNAUD, Prof. Laurent BERTRANDIAS, Prof. Dominique COLOMB, Prof. Bertrand FAURÉ, Prof. Laurent GERMAIN, Prof. Rhona JOHNSEN, Prof. Denis LACOSTE, Prof. Zheng LIHUA, Prof. André SOBCZAK, and Prof. Wang XIAO.

We also acknowledge Prof. Delphine GODEFROIT-WINKEL, Prof. Bing XIN, Prof. Pierre BUIGUES, Prof. Philippe MALAVAL, Prof. Victor DOS SANTOS, Prof. Gervaise DEBUCQUET, and Prof. Dominique DESJEUX for their support.

At last, we particularly wish to thank Mrs. Brigitte LESCAT, first for her unconditional support, but especially for her outstanding management of the TBS-Audencia DBA program, which made this adventure possible including the writing of this book.

CHAPTER 1

PREPARATORY STEP: A RESEARCH PROJECT FOR A MANAGER

Synthesis of the chapter:

1. Research in general, research in management
2. The ecosystem of research in management
3. The doctorate of business administration
4. The DBA three-step global organization
5. Interviews with experts
6. Templates

References

1. Research in general ... research in management

In this section, we first define science and epistemology, in a simple and general manner. Then the main paradigms in management research are briefly presented. The section is closed with the presentation of the objectives of management research, starting in general and ending with a focus on the DBA case.

1.1. General definitions

1.1.1. Science

According to Encyclopedia Britannica:

Science is any system of knowledge that is concerned with the physical world and its phenomena and that entails unbiased observations and systematic experimentation. In general, a science involves a pursuit of knowledge covering general truths or the operations of fundamental laws.¹

According to the Oxford dictionary, science is:

the intellectual and practical activity encompassing the systematic study of the structure and behavior of the physical and natural world through observation and experiment.²

To go beyond these quite similar and formal (moreover not very exciting) definitions, we first must remember that science is exciting. Science enables the discovery of the universe; it is accountable for our understanding of how things are, and may be in the future. Moreover, science is one of the most thrilling adventures in the world: discovering something nobody had discovered before. The list of the applications of science is endless in our everyday lives, and so is the list of projections in our minds about what science really is: *white lab coats and microscopes, an astronomer peering through a telescope, a naturalist in the rainforest, Einstein's equations scribbled on a chalkboard, the launch of the space shuttle ...* To be clear, we must keep in mind a definition of science coming from the scientific community. According to a blog from Berkeley University:

¹ <https://www.britannica.com/topic/science>

² <https://en.oxforddictionaries.com/definition/science>
