

Rehabilitation of Motor Function after Stroke: The Techniques Used and Their Mechanisms

Collection Editor: Auwal Abdullahi

Description

This book is about interventions such as task specific training, conventional therapy, robotic rehabilitation, mental practice and tasks observation (motor imagery) and mirror therapy used for the rehabilitation of motor function following stroke. It will also discuss the mechanisms through which the interventions improve motor function.

About the Editor

Auwal Abdullahi has 14 years experience as a clinician and a Lecturer in Physiotherapy. He is the author of the book *An Outline of Clinical Decision Making for Physiotherapists*. In addition, he has published widely on rehabilitation of motor function after stroke.

Submission Requirements

All chapters submitted should conform to the grammar and formatting guidelines provided by Cambridge Scholars Publishing, which can be viewed here: <https://www.cambridgescholars.com/pages/forms-guidelines>;

Unless agreed with the Editor prior to submission, referencing should be in Chicago;

Any work submitted for publication should be free of copyright restrictions and a statement should be submitted in support of this;

Contributions should be scholarly rather than anecdotal or unverifiable;

Contributions must be wholly in English, excluding footnotes, appendices and short extracts for translation;

While we will perform pre-press evaluations on the collection, we do not provide full proofreading services, so we ask that works are submitted to us in their final, 'ready-to-go' form.
